

# Bromium & HP Secure Deployment Bundles

## Key Benefits:

- Rapid deployment
- Turnkey service offering
- Low entry point designed to fit your needs
- Empowered employees

*“Valspar has been very happy with the Bromium product and their support staff. This tool gives a remediation factor that we didn’t have before. Plus it gives the Valspar Security team the threat intelligence needed to incorporate in their tools.”*

SECURITY MANAGER, S&P 500 CHEMICALS COMPANY,  
VIA TECHVALIDATE

## Easy Deployment, Rapid Resilience

WannaCry proved how ineffective detection-based security controls are at stopping threats. In 2016, global spending on security exceeded \$80 billion. Even with all this spending and effort, cybercriminal activity cost over \$3 trillion.

Bromium is a transformative leader in virtualization-based security delivering application isolation and control. We transform what was once your biggest liability, the endpoint, into your best defense. Bromium hardware-isolates threats so they your data is protected. For servers and legacy hardware, we provide detection and remediation of malicious activity.

Through careful design consideration and implementation our professional services team help to transform your infrastructure so that it is resilient to the changing threat landscape.

The Bromium Secure Deployment Bundles give you the services you need to quickly achieve cyber resilience with minimal effort. Each bundle includes:

- Bromium Secure Platform subscription
- Onsite deployment assistance and support
- Training and Certification
- Customized deployment plan
- Cloud hosted management with no infrastructure costs to you

Bundles are available for new customers so that you can immediately realize the benefits of virtualization-based security. Bundle sizes are based on number of devices licensed.

1. Bromium Secure Deployment 15,000 Bundle
2. Bromium Secure Deployment 25,000 Bundle
3. Bromium Secure Deployment 50,000 Bundle
4. Bromium Secure Deployment 100,000 Bundle

*“This is a great product and is very effective in securing our enterprise.”*

## What You’ll Get

### **One or Three Year Subscription Bromium Secure Platform**

Bromium Secure Platform is a security solution based on two principals: Protection and Visibility.

- **Protection** is delivered via the Bromium hardware-enforced application isolation and control to stop zero-days and targeted threats.
- **Visibility** is delivered via host space to detect and respond to any malicious activity on the host.

Bromium Secure Platform consists of three licensed products; Bromium Secure Browsing, Bromium Secure Files, and Bromium Secure Monitoring.

### **Onsite Professional Service Deployment Assistance**

Bromium Solution Customer Success Managers (CSM) are experts in designing and implementing the Bromium platform. They are experienced consultants that have a single goal in mind. Your success. We will help define the customer deployment plan and remain onsite to help deploy and configure Bromium so that you achieve the highest level of security.

A dedicated CSM is assigned to each of our customers that purchase a deployment bundle. In addition to deployment assistance, the CSM helps with proactive product configuration and updates to help your organization defend against new threats.

### **Training and Certification**

Empowering your end users to go about their business without worrying about threats is our top priority. The same can be said for those administering our solution. Our certification program offers your IT team the ability to become certified on Bromium products. They will gain a deeper understanding of how Bromium products work and how to configure advanced functions to further increase your security posture.

### **Customized Deployment Plan**

As with any solution, planning is required before deployment. Our Solution Architects have designed and deployed virtualization solutions in some of the most complex environments in the world.

Bromium Secure Deployment Bundles include a detailed design plan showing how to deploy Bromium in your environment. This plan is defined by the Solution Architect working with you. It is used as the blue print for the deployment to ensure successful deployment. You’ll know exactly what to expect and when to expect it.

### Cloud hosted management

Deploying and managing Bromium is made easy with our cloud hosted Controller. During deployment of Bromium, our professional services team will implement a dedicated cloud hosted Bromium Controller to manage all your Bromium endpoints and servers.

At every step in our relationship, we hope you'll find Bromium is committed to your security and your success.

## About Bromium

Bromium pioneered the next generation of enterprise protection by turning an enterprises largest liability, endpoints and servers, into the best defense. We use a combination of our patented hardware-enforced containerization to deliver application isolation and control, and a distributed Sensor Network to protect across all major threat vectors and attack types.

Unlike detection-based techniques, Bromium automatically isolates threats and adapts to new attacks and instantly shares threat intelligence to eliminate the impact of malware. Our technological innovations have earned the company numerous industry awards. Bromium counts a rapidly growing set of Fortune 500 companies and government agencies as customers.

#### ABOUT BROMIUM

Bromium has transformed endpoint security with its revolutionary isolation technology to defeat cyber attacks. Unlike antivirus or other detection-based defenses, which can't stop modern attacks, Bromium uses micro-virtualization to keep users secure while delivering significant cost savings by reducing and even eliminating false alerts, urgent patching, and remediation—transforming the traditional security life cycle.
