

Webroot SecureAnywhere® Global Site Manager™ Console

Reduce Time and Management Costs with Global Views, Policies, Overrides, Hierarchical Management and Granular Administration and Access Rights

OVERVIEW

Because many more MSPs (Managed Services Providers) and larger enterprises are adopting Webroot SecureAnywhere® we have introduced an enhanced version of our existing management console. This new management console is designed to accommodate the more complex and highly granular security management infrastructure these organizations need.

The Webroot SecureAnywhere® Global Site Manager™ console is available as a no cost option to any organization needing the increased controls and flexibility it delivers. Its hierarchical design now makes it far easier to manage multi-site, multi-organization, multi-administered deployments. And, as the console is cloud-based, we are continuously upgrading its functionality and capabilities throughout 2014 based upon our development roadmap and customer feedback - to ensure it fully meets MSP and enterprise requirements.

Multiple Sites, Multiple Administrators and immediately view any Endpoint needing attention

FAST FACTS

Auto-Provisioning

- » New parent/child keycodes – simplify monitoring and managing different entities like departments, subsidiaries, and customers
- » Generate child keycodes automatically from the console – identify, add and remove departments, locations or customers easily
- » Full, seamless administrative control – no delays in buying or applying for a new keycode from Webroot for each new entity

Unique Customer Consoles

- » Hierarchical management views make it easy to create and monitor multiple customer consoles or locations simultaneously
- » Separate customers or locations with unique administrative access permissions

Top Level Oversight Views

- » Real-time oversight with new top level views over individual, managed entities
- » Monitor endpoints that need attention

Advanced Searches and Filtering

- » A wide range of parameters to create refined filtered searches adding speed and flexibility when looking to identify individual or groups of endpoints

Administrator Site Notes

- » Administrators can add notes about each customer or location, such as billing cycles, seats allocated, etc.
- » Granular Access Rights & Permissions
- » Easily delegated admin access permissions for every customer or

location under management

- » Fast, granular, customized access to individual entity management consoles with multi-tiered access permissions
- » Administrator permissions pop-up clarifies the precise capabilities and site permissions being granted for each administration type – Super; Limited and Site.

Direct Access Management

- » New Global Site Manager console UI allows direct access to any customer, site or other console
- » Seamless integration with existing console selection screens, plus the option to populate multiple MSP portals under a single account
- » All users are protected against new threats in real time

Global Policies and Overrides

- » Global Policies and Overrides make it simple for any ‘Super’ administrator to create policies and overrides at the Global Site Manager level, and then apply them to any Endpoint Protection customer or site that accepts global commands.
- » Globally import and export policies and overrides providing the ability to import and export policies and overrides between sites at Global Site Manager and Endpoint Protection (Site) level.

Zero On-Site Infrastructure

- » Centralized online management for all endpoints
- » Highly automated management and reporting
- » No on-site management hardware or software
- » Full remote policy and endpoint management
